

SEAL — Build Plan

Internal document — Ali Ben Yezza & Josh

September 2026

1 MVP

- Address input field
- Data pipeline: creator history, holder concentration (Blockscout), market state (DexScreener)
- Reasoning agent call, plain-language output
- Legal disclaimers
- Auto-deploy on push to `main`

2 Wave 1 — ready before launch

Branch	Content	Release
feat/creator-history	Full creator history, chunked pagination	Day +1
feat/contradiction-detector	Flags contradicting signals	Day +3
feat/holder-deep-scan	Linked wallet cluster detection	Day +5
feat/response-cache	Response caching for consistency	Day +7

3 Wave 2 — building in parallel

Branch	Content	Status
feat/telegram-bot	Telegram interface	From Day +1
feat/watchlist	Saved tracked tokens	From Day +2
feat/creator-reputation-trend	Behavior over time	From Day +3
feat/multi-token-compare	Side-by-side comparison	From Day +4

4 Costs

Item	Monthly estimate
Robinhood Chain RPC (paid, if needed)	up to \$50
Claude API — variable, assuming 100 queries/day (~100 users)	\$30
Hosting (Vercel/Railway/Fly.io)	up to \$20
Domain name	\$10 – \$15/year
